Distances shown are horizontal, ground-level distances, in metres and decimals thereof.

Integrated Survey Area No. 4, City of Kelowna,
NAD83(CSRS) 4.0.0.BC.1.

Grid bearings are derived from observations between geodetic control monuments 73H1781 and 96H2132 and are referred to the central meridian of UTM Zone 11.

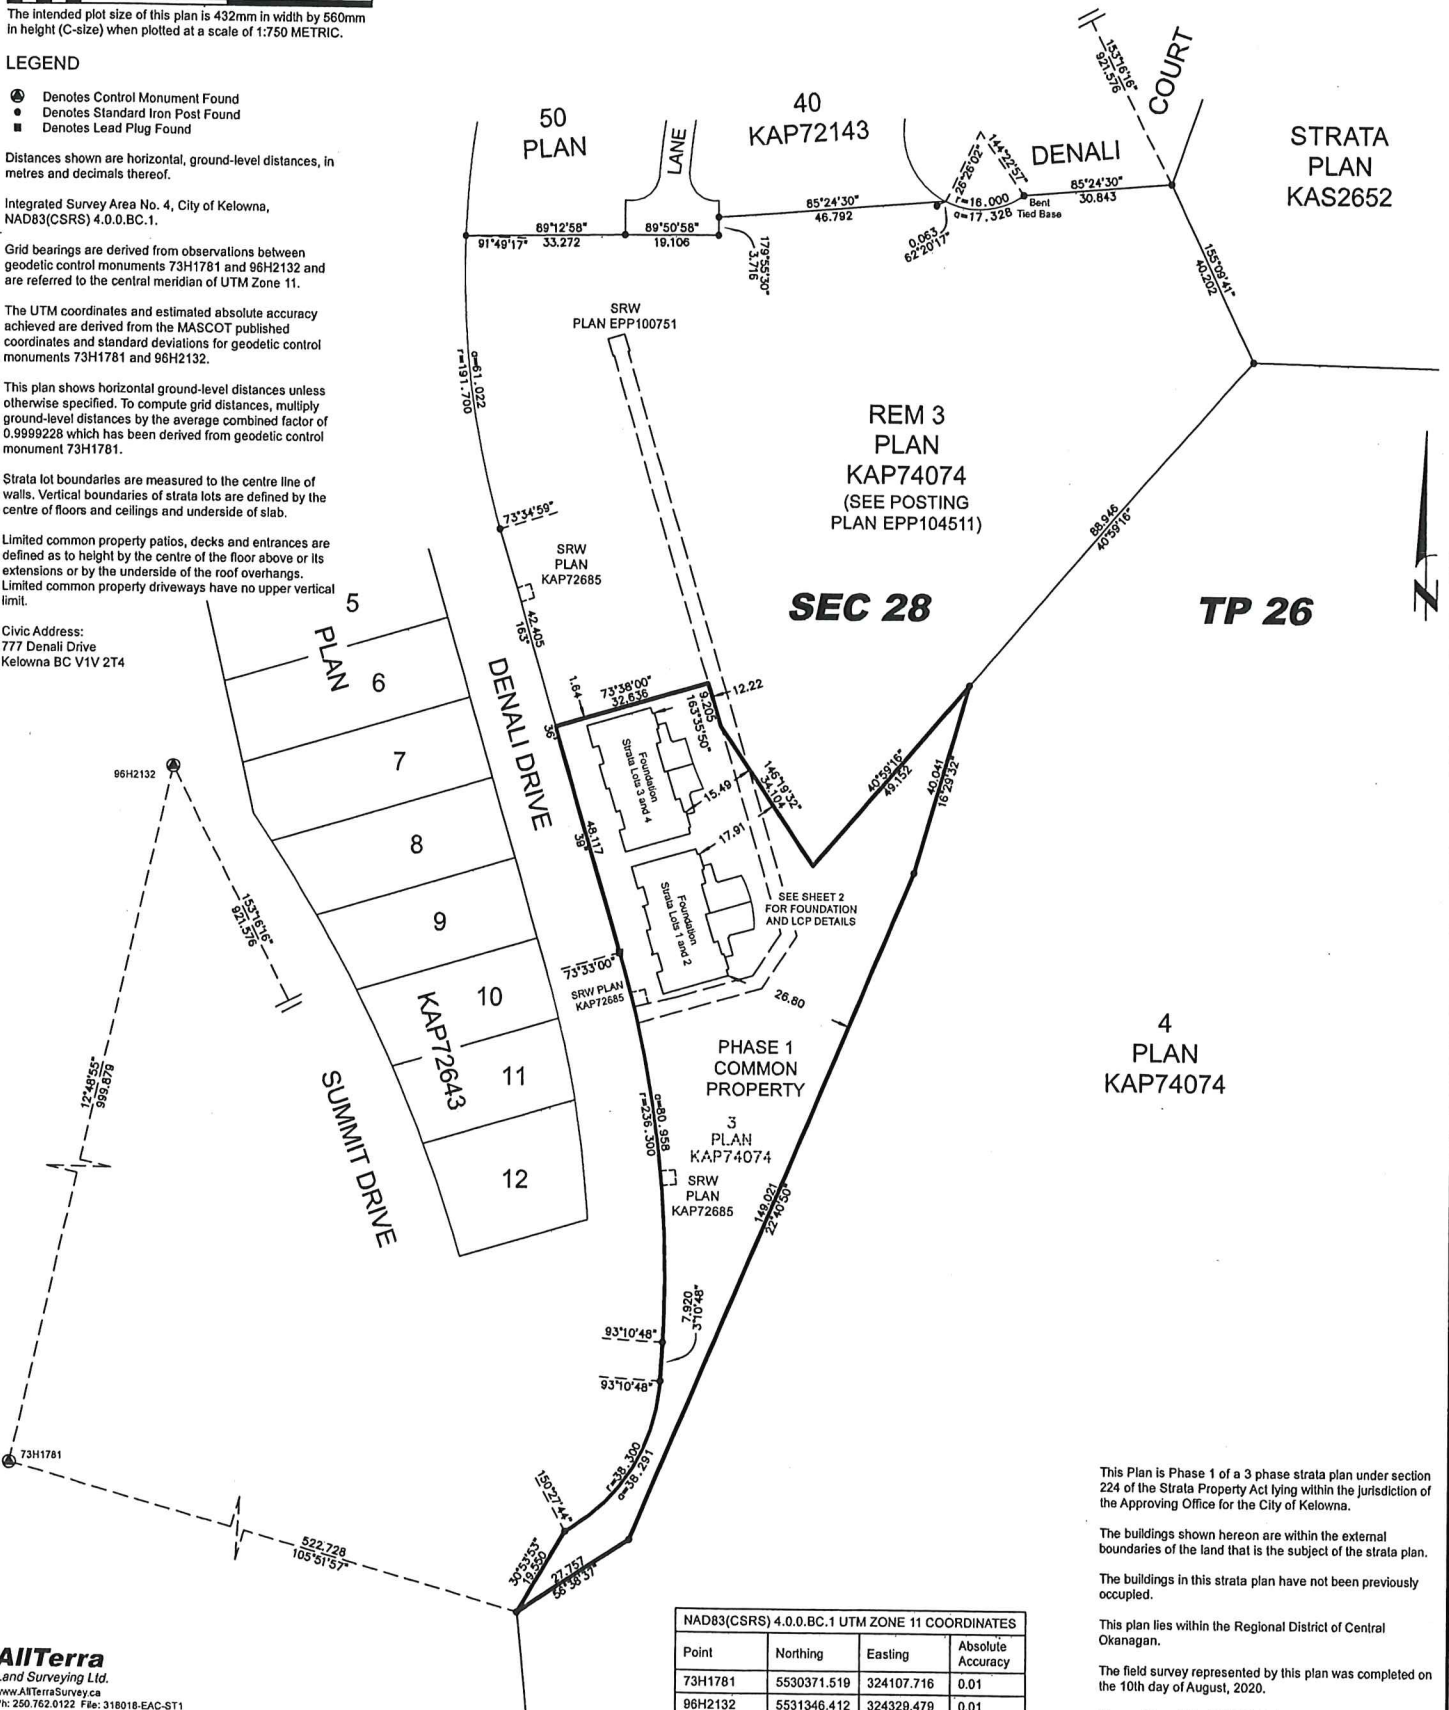

The UTM coordinates and estimated absolute accuracy achieved are derived from the MASCOT published coordinates and standard deviations for geodetic control monuments 73H1781 and 96H2132.

This plan shows horizontal ground-level distances unless otherwise specified. To compute grid distances, multiply ground-level distances by the average combined factor of 0.9999228 which has been derived from geodetic control monument 73H1781.

Strata lot boundaries are measured to the centre line of walls. Vertical boundaries of strata lots are defined by the centre of floors and ceilings and underside of slab.

Limited common property patios, decks and entrances are defined as to height by the centre of the floor above or its extensions or by the underside of the roof overhangs. Limited common property driveways have no upper vertical limit.
